

Product Overview

The UK's leading Technical Experts

in Standby Power, Uninterruptible Power Supplies and Combined Heat & Power Systems

Welcome,

Thank you for taking the time to browse through our Product Overview, we trust you find it informative.

There is a lot more to shentong**group** than meets the eye, and indeed much more than is possible to put into words.

The staff, the spirit, the ethics, and the dedication to our clients cause are qualities you cannot touch, but you can feel!

We trust your choice leads you to experience this feeling, and I trust you enjoy working with the shentong**group** team, as much as I do.

Thank you and regards,

Jody B. Meek
Managing Director

The UK's leading Technical Experts in **Standby Power, Uninterruptible Power Supplies** and **Combined Heat & Power Systems**

Trusted for over 30 years by public and private organisations, shentong**group** advise on, supply, install and maintain all aspects of critical power continuity.

We keep companies – of all sizes, across every industry and in any UK location, no matter how remote – fully functioning in the face of mains power failure or the ongoing absence of available mains power.

Why use shentonggroup?

- Over 30 years knowledge and experience
- Ethical family business
- Network of 18 depots nationwide
- Premium quality systems
- Project management and commissioning

Vision Statement

Backing-up corporate Britain, shentong**group** will become the number one provider of innovative standby power solutions for every mission critical organisation.

Mission Statement

Delivering true peace of mind

- Our Products and Services meet or exceed the demands for which they were designed
- Our Systems ensure that our promises are achievable and kept
- Our People demonstrate levels of integrity and commitment that exceed our client expectation

About shentongroup

shentongroup is a family-owned Limited Liability Partnership (LLP), and our expertise stretches back three decades.

Established in 1982, we started by selling diesel generators under the name Scorpion Power Systems. Over 30 years on, we are Shenton Global LLP, trading as shentongroup. Our reputation and experience has shaped the business to it's current format.

We are now considered to be the UK's Leading Technical Experts in Standby Power, Uninterruptible Power Supplies and Combined Heat and Power Systems.

The reason for our success is our people.

We're proud and privileged to have a workforce whose will to succeed is second to none. We've created a culture of continuous improvement, of dedication and persistence, of innovation and aiming high.

Our Process

Project managing successful commercial back-up power installations requires a carefully planned process. Our 30 years of experience has helped to refine this into a tried, tested and proven approach.

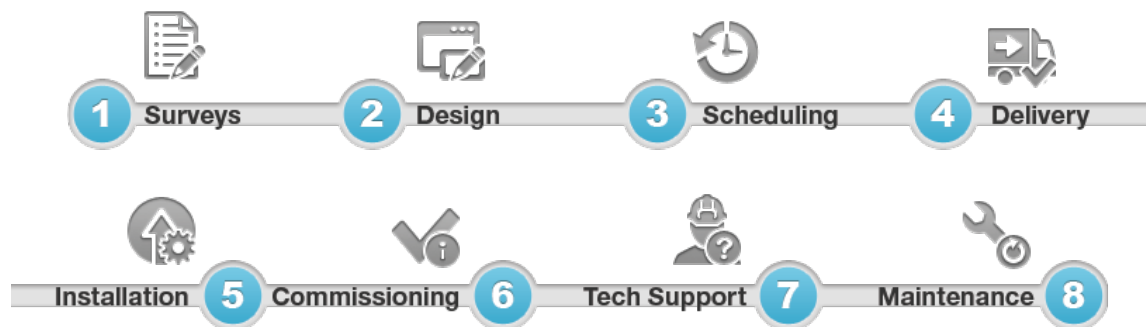

Any project starts with a site survey, which is totally free of charge and will be arranged to fit around your busy schedule. This enables us to get a full understanding of your current infrastructure, your current critical needs and of course, your future power requirements.

Once these are established our technical team can design a system that suits your power needs and businesses budget.

Each project is carefully planned and as our customer, you will be kept fully and regularly informed throughout.

We'll liaise with you on logistics to minimise disruption to your business, aid with the commissioning process, and give you technical support throughout, to put your mind at ease.

And after your power system is fully functional, we'll continue our excellent customer service and technical support to help maintain your system and your business continuity.

Nationwide Coverage

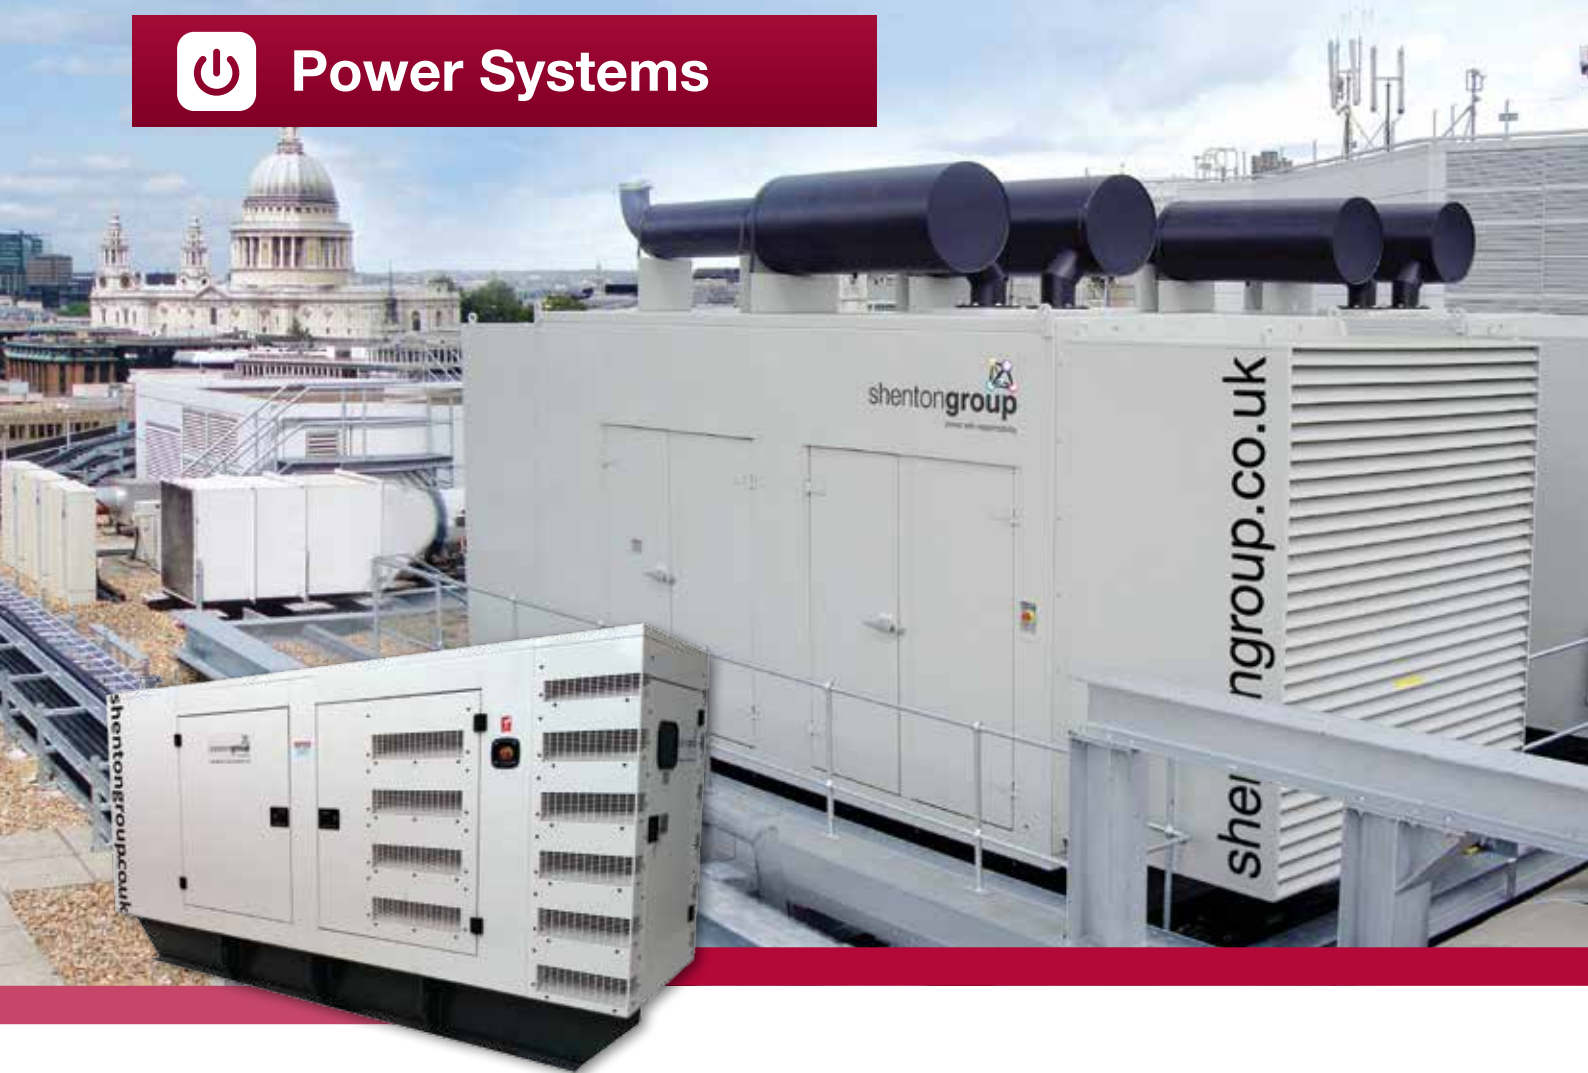

Our nationwide service team provide planned preventative maintenance contracts (PPM) for a wide range of makes, models and sizes of Generators, CHP, UPS, HV & LV Switchgear. Our central team of Service Coordinators based in Shenton House, Andover, work tirelessly with our clients to provide routine maintenance and emergency call out response to your equipment.

Our 24/7 control centre awaits the call of our clients in need and at a moments notice, can dispatch the relevant engineer. We have a national guaranteed response time of 4 hours.

All vehicles are fitted with trackers to enable us to give you up-to-the-minute information on the whereabouts of the engineer en-route to your site. With thousands of service contracts UK wide, we consider ourselves experts in the rapid response service industry.

Power Systems

Standby Power, UPS Systems and AMF Panels to ensure your business continuity

When your mains electrical supply fails it's the standby generator that picks up the full electrical load for your building or site to avert disaster and ensure business continuity as usual. shentong**group** offers a comprehensive range of single and three phase generator solutions from 10kVA to 2MVA and UPS systems of all sizes.

Why choose standby Power Systems?

- Business continuity – when the power fails, your business doesn't
- Disaster Recovery – so you stay in control when others aren't
- IT equipment protection – to maintain reliable performance using a reliable power supply
- Increased resilience and total peace of mind in an increasingly uncertain world

Power Therm

Combined Heat and Power Systems offering superior efficiencies

Power Therm is shentong**group**'s range of combined heat and power units (CHP).

shentong**group** is the UK Partner for Tedom, one of Europe's leading CHP manufacturers, serving markets worldwide.

At shentong**group** we're keen to help you improve the sustainability and security of your power supply and cut your carbon emissions too.

Combined heat and power energy generation, carefully selected for your needs, is one of the largest single steps you can take to reduce your energy bills.

shentong**group** deliver your entire project from inception, through detailed design to installation and commissioning. Thereafter, we offer industry leading maintenance and service support packages coupled with sophisticated online remote monitoring services.

Why choose CHP and Power Therm?

- Improve the sustainability of your power supply
- Reduce your energy bills
- Reduce your carbon footprint
- Run fully independently from the electricity grid

Power Rental

Nationwide Power Rental Solutions for all types of standby and prime power applications

We know that working capital, cost certainty and the flexibility to adjust their power protection systems are essential considerations for many businesses. Renting power supply equipment offers you dependable power protection at an affordable, predictable cost, on terms and timescales that suit your business and your budget.

We offer fully flexible contracts that allow for upgrades, additions, cancellations and extensions – so you'll always have the power generation and standby systems you need; nothing more, nothing less.

Why use Power Rental?

- Flexible contracts and timescales
- Avoids capital expense
- Temporary and semi-permanent solutions

Power Call

**Record
Delivery
Time
of 23 Minutes!**
