The Basic Technical Data are applicable for the standard conditions pursuant to the "Technical instructions" document.

The minimum permanent electrical output must not drop below 50 % of the nominal output.

Gas consumption is expressed under the invoicing conditions (15°C, 101.325 kPa).

Gas consumption tolerance, or fuel input tolerance, at 100% load is +5%.

Tolerances of other parameters are mentioned in "Technical Instructions - Validity of Technical Data" document.

1) Maximum heat output is a sum of heat outputs of secondary circuit with exhaust gas cooled to 120°C and aftercooler circuit

2) Technical parameters of CHP unit with economizer (an option). Heat output indicated is based on inlet water temperature 70°C into additional exhaust gas exchanger and exhaust gas cooled to 85°C.
3) Technical parameters of CHP unit for emergency / island mode (an option).

4) It is non-overload able output for $\cos \varphi = 0.8$.

1) Dimensions depend on direction of power outlets: Passing through switchboard = 2100x800x800 mm One direction = 2100x800x1000 mm

Width of switchboard R1 may be extended in special cases.

- 2) Switchboard's width depends on size of frequency changers.
- 3) Switchboard's height depends on MWM. Standard is 1200 mm.
- 4) Switchboard's dimension depends on number of dry coolers' fans.
